

Unfinished wall paper

Unlike the half-painted wall treatment, these rooms play with the layering effects of wallpaper to create graphic interest.

Try cutting around the paper's pre-printed design to create a custom half-wall mural, or layer paper in strips of different thicknesses for a modern striped or colour blocking effect. To ensure the effect looks intentional, keep paper edges clean and sharp.

Not sure you want to commit? Opt for temporary peel-and-stick wallpaper instead.
